

Job Title: Certified Industrial Hygienist- Remediation
Program: Environmental Restoration
Job Status: Contingent Hire Based on Anticipated Backlog
Location: Southeastern U.S. and Texas

Stell is a seasoned veteran- and woman-owned small business providing expertise and innovation across the resilience, environmental, restoration, and compliance service sectors. We offer an excellent benefits package that includes medical/dental insurance, 401k opportunities, paid vacation, holiday and sick time.

Position Overview:

Stell is looking for Certified Industrial Hygienists to work on an on-call basis in support of our industrial clients in the southern U.S. The position is headquartered in the Philadelphia area but candidates may work remotely anywhere in the southeastern U.S. (e.g. past projects have been in Florida, Alabama, Louisiana) and Texas. The position will support existing and anticipated projects for insurance and potentially other clients.

Responsibilities:

The successful candidate would perform a variety of technical duties pertinent to investigation, assessment and remediation of buildings potentially impacted by mold, *Legionella* or other stressors responsible for human health risks. Successful candidates would work independently on an as-needed basis to prepare proposals and budgets, perform building assessments, including sampling and analysis, interpret and evaluate results, and prepare written reports, including recommendations for remediation as required.

Qualifications (Education and Experience):

We seek highly motivated, experienced CIH professionals who are self-starters and capable of completing an entire hazard assessment on their own, including client contact at facilities. The ideal candidate will have an MS in Industrial Hygiene, Public Health or related field. Applicants must have CIH certification and a minimum of five years of related experience. All candidates should have excellent written and oral presentation skills, work well with people and have excellent organizational skills. Experience in mold investigations and *Legionella*, and assessment of indoor air quality is strongly preferred. Applicants should also be familiar with OSHA and state regulations, personal protective equipment and preparation of OSHA-compliant health and safety plans.

Additional desired experience will include at least five of the following areas:

- Technical writing;

- Air sampling and Instrumentation;
- Analytical methods and chemistry and evaluation of data quality;
- Hazard evaluation;
- Statistics and epidemiology;
- Engineering controls, particularly for mold and other indoor air issues;
- Building remediation and demolition;
- Facility management (HVAC systems, building maintenance and materials, etc.);
- Industrial processes;
- Experience in the insurance industry;
- Project management experience including costing, preparation of bids and proposals and direction/mentoring of staff.
